## Foreign Agricultural Trade of the United States

March/April 1986

\*\*\*\*\*

## IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION

\*\*\*\*\*

\* Foreign Agricultural Trade of the United States is published six times a  
 \* year with two supplements. Subscription prices are \$26 a year domestic  
 \* and \$32.50 foreign (prices subject to change). Send check or money order  
 \* payable to "Superintendent of Documents" to Superintendent of Documents,  
 \* U.S. Government Printing Office, Washington, DC 20402. For faster  
 \* service, call (202) 783-3238 and charge your subscription to your VISA,  
 \* MasterCard, Choice, or GPO Deposit Account.

\*\*\*\*\*

### IS IT TIME TO RENEW?

\*\*\*\*\*

\* Your subscription to this publication may be due to expire soon. If so,  
 \* you will get a renewal notice in the mail from GPO about 90 days ahead of  
 \* time. Only one notice is sent. You must return it promptly to ensure  
 \* uninterrupted service. If you have misplaced your renewal notice, use the  
 \* form on the back of this report. Be sure to attach mailing label.

\*\*\*\*\*

### LIST OF ABBREVIATIONS

<u>Abbreviation</u>	<u>Description</u>	<u>Abbreviation</u>	<u>Description</u>
Ag	Agricultural	MT	Metric tons

Prepared by the International Economic Indicators Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were C. Edward Overton, Thomas A. Warden, and Thomasine B. McCall. Mary L. Fant provided statistical support. Judith Placer provided word processing and table formatting support. Editorial support was provided by Linda L. Hatcher, Research Information Branch, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economic System Branch, Data Services Center, and Penni Korb, International Economic Indicators Branch.

# Digest

U.S. Agricultural Exports Continue To Drop (see p. 3). U.S. agricultural exports dropped to \$12.8 billion in the first 5 months of fiscal year (FY) 1986 (Oct. 1985-Feb. 1986), 20 percent below exports in the same period of 1985. Wheat and corn exports each declined nearly \$1 billion due to lower export volume and prices. Although new farm legislation will dramatically improve the U.S. competitive position in world markets, provisions for most commodities will not start until late summer or early fall. However, the impending lower prices have already caused importers to delay purchases and competitors to attempt to accelerate sales.

Import Value Rises (see p. 70). U.S. agricultural imports rose to \$8.6 billion in the first 5 months of FY 1986, up 6 percent over levels in the same period of 1985. Import value reached \$2 billion in January, the highest monthly level since March 1985, due to increased demand and higher prices for many products. Noncompetitive imports--such as coffee and bananas--expanded to \$3.1 billion in the first 5 months, 11 percent over those of the same period in 1985, while competitive imports--such as meat, fruits, and vegetables--edged up 3 percent to \$5.5 billion.

Dollar Stabilizes With Lower Interest Rates (see p. 112). The U.S. dollar continued its decline from February 1985 into the early months of calendar year 1986 as long-term interest rates fell. Sharp declines in world oil prices weakened energy-related currencies but provided prospects for lower inflation, which may help stabilize currencies near present levels. Major industrial countries (G-5 members include the United States, United Kingdom, Germany, France, and Japan) lowered their lending discount rates in early March, and again in mid-April, in response to the improved inflation outlook.

California Leads Farm Export States (see p. 116). California replaced perennial leaders Iowa and Illinois as the top U.S. agricultural export State in FY 1985 (Oct. 1984-Sept. 1985). While export revenue of bulk grains and soybeans fell 25 percent and hurt the major Midwestern export States, California maintained its exports of fruits, nuts, and vegetables, its primary export commodities, to move into the top spot. Other top exporters were Texas, Nebraska, Kansas, Minnesota, North Dakota, Indiana, and Ohio.

Export Shares of Agricultural Production Fall (see p. 128). The export share of U.S. farm production fell in FY 1985 to 17 percent, its lowest level in 13 years. Farm output value rose to a record-high \$153.3 billion, while export revenue fell to \$31.2 billion, its lowest level in 7 years. As export markets declined, excess production drove prices down. However, these lower prices have not yet induced greater export demand.

Freight Rate Indexes and Freight Rate Futures Trading Are Important Analytical Tools (see p. 131). The costs of commercial shipping services, which transport most agricultural exports, influence exporters' profits and add 15-30 percent to the prices of exported products. Indexing freight rates aids in the study of ocean shipping markets, which yield a range of volatile rates. In addition, freight rate futures trading represents a means for shippers and carriers to hedge against price movements in the charter market and provides a basis for forecasting ocean transportation rates.

Ranking of Major Agricultural Importers Shows Little Change (see p. 136). The primary farm importers, except for recent entrant Saudi Arabia, remained the same from 1976 through the period 1980-84, although their rankings changed slightly. They were West Germany, the USSR, the United States, Japan, the United Kingdom, France, Italy, The Netherlands, Belgium-Luxembourg, and Saudi Arabia. Together, these countries' imports amounted to \$141 billion, 58 percent of the world total.

U.S.-Canadian Agricultural Trade Balance Reverses Direction (see p. 139). The United States became a net importer of Canadian farm products for the first time when U.S. agricultural exports fell 17 percent in 1985. The small U.S. agricultural trade surplus of \$112 million in 1984 became a \$272-million deficit in 1985. The continuing weakness of the Canadian dollar is the primary reason behind the reversal in the U.S. trade position. The export outlook for 1986 is not optimistic, given low U.S. prices and the expected low value of the Canadian dollar.

# U.S. Agricultural Exports Continue To Drop

U.S. agricultural exports fell \$3.2 billion in value during the first 5 months of fiscal year (FY) 1986 (Oct. 1985-Feb. 1986) to \$12.8 billion, 20 percent below exports for the same period in FY 1985. Wheat and corn exports each declined nearly \$1 billion as lower export volume and lower prices took their toll. Although the value of both high-value and bulk commodity exports declined, higher valued exports generally performed better. Volume for U.S. farm product exports fell 16 percent to 55 million metric tons. Wheat exports dropped 5.1 million tons, and coarse grain shipments fell 6.9 million tons. However, exports of soybeans and soybean meal together rose 1.7 million tons.

## New U.S. Commodity Programs Anticipated

The first 5 months of FY 1986 began a year of transition for U.S. agricultural exports. On the one hand, February 1986 marked the passage of an entire year since the peaking of the U.S. dollar on foreign exchange markets. In addition, new U.S. farm legislation already in place is expected to substantially improve the U.S. competitive position in world markets.

On the other hand, the U.S. dollar did not weaken against the currencies of important agricultural customers as much as it did against the major currencies of foreign exchange markets. Most new commodity programs stemming from the recent farm legislation will not start until summer and early fall. Anticipation of these programs' lower prices encouraged importers to delay purchases and competitors to accelerate sales. Wheat was the commodity closest to a new crop year price regime and probably the most affected.

Wheat export volume fell 34 percent to 10 million tons. Value dropped \$900 million to \$1.4 billion. The largest decline came in sales to the Soviet Union. By February 1985, the Soviets had already made virtually all of their purchases for the year and had taken almost 2.8 million tons of U.S. wheat. In contrast, by February 1986, shipments totaled only 153,000 tons because a better harvest made Soviet needs less pressing; purchases have halted, at least temporarily. While the U.S.-USSR grain agreement calls for the USSR to purchase 4 million tons of U.S. wheat annually, FY 1985 purchases reached only 2.9 million tons.

Sales to Brazil also fell below 132,000 tons in the first 5 months of FY 1986 compared with 1.7 million tons during the same period in 1985 because Brazil harvested a record-large wheat crop. Dry weather during the wheat harvest damaged other crops but helped wheat production rebound. Prospects for U.S. wheat sales to Brazil also suffered in 1986 from a new Argentine-Brazilian trade agreement.

Sales to China fell almost 800,000 tons as total Chinese imports and the U.S. market share continued to fall. Exports also declined to the European Community, Nigeria, Turkey, and Bangladesh.

The only major increase in U.S. wheat exports came in shipments to North Africa. Export Enhancement Program (EEP) initiatives for Egypt and Algeria raised wheat shipments, offsetting lower exports to Morocco and Tunisia, and exports to North Africa rose almost 800,000 tons to over 2.2 million tons. Wheat sales to Tunisia ceased in the wake of Tunisia's record-large grain crop, but shipments to Morocco

under an EEP initiative equalled those of a year earlier under the Blended Credit Program. Egypt took over 1 million tons of U.S. wheat compared with 478,000 tons in the first 5 months of FY 1985.

#### Coarse Grain Export Value 34 Percent Lower

U.S. coarse grain exports fell 6.9 million tons to 22.5 million tons as several important customers met more of their needs through domestic production. With prices lower, export value fell 35 percent to \$2.4 billion. As with U.S. wheat exports, coarse grain exports to the Soviet Union dropped the most. Record-high Soviet import demand boosted U.S. sales to nearly 9.3 million tons in 1985, but with an improved Soviet harvest, shipments in the first 5 months of 1986 fell below 6 million tons.

Grain production in Western Europe declined slightly, but U.S. coarse grain exports to the region dropped 538,000 tons. Grain imports by the European Community (EC) are expected to fall to their lowest level in 15 years in 1986 because of large domestic stocks. U.S. corn has in recent years been imported primarily for industrial starch production, but increased substitution by EC wheat is cutting import needs. Wheat substitution in feed is also high, squeezing feed use of imported coarse grains as well.

#### Spain and Portugal Enter EC

Although Spain and Portugal formally joined the EC January 1, 1986, EC policy on grain imports did not apply there until March 1. Import levies did not start in Spain before that date, and U.S. coarse grain shipments there surged as importers built stocks. However, while sales to Spain rose 400,000 tons (a 36-percent increase), shipments to Portugal fell 360,000 tons as demand for mixed feeds weakened and substitution for grain by manioc increased.

Better crops in South Africa, Mexico, Turkey, Iraq, Venezuela, and Canada reduced U.S. exports to those countries. Sales to South Africa, Turkey, and Iraq largely ceased, with a loss of 1.9 million tons compared with exports in the first 5 months of FY 1985.

U.S. exports to Brazil rose 730,000 tons because a drought cut corn production, and Bulgaria's drought boosted U.S. exports there to 246,000 tons compared with none in 1985. Exports to Egypt and Korea also increased.

#### U.S. Cotton Market Share Plummets

U.S. cotton exports fell nearly 70 percent in value and volume, the largest proportional decline for any major commodity. At \$347 million, cotton export value was more than \$700 million lower than during the first 5 months of FY 1985. An unusually wide, but temporary, gap between U.S. and world prices substantially reduced the U.S. market share, and exports to every major customer fell.

Exports to Japan, the largest customer, fell 67 percent to 61,000 tons, while exports to middle-income countries in East Asia (Korea, Taiwan, and Hong Kong) declined from 196,000 tons to 65,000 tons. Another 100,000 tons was lost in exports to Western Europe.

### Soybean Exports Rise 12 Percent

In contrast to declining exports for most major U.S. farm commodities, soybean exports rose 12 percent in 1986 to 11 million tons. A drought in Brazil, the largest U.S. competitor, reduced production there by about 30 percent. The increased U.S. share of the world market has meant higher exports despite nearly stagnant world demand.

Even Brazil imported 256,000 tons of U.S. soybeans to rebuild its export-depleted stocks at lower prices, and China, another U.S. competitor, imported more than 60,000 tons. The Soviet Union bought more than 1 million tons of U.S. soybeans, marking the end of a 1-year absence from the U.S. market. By February, over 570,000 tons of U.S. soybeans had been shipped to the USSR.

The contrast between wheat and soybean exports illustrates the situation facing U.S. agricultural exports in 1986. Annual wheat export volume has been typically more than twice the soybean export volume, but soybean exports exceeded those of wheat during December, January, and February, and will probably do so for several succeeding months.

Although U.S. soybean exports to Western Europe climbed slightly to 6 million tons, soybean meal shipments there more than doubled, reaching 1.5 million tons. Soybean sales also increased to Japan, Korea, and Eastern Europe, but shipments to Mexico fell from nearly 575,000 to 120,000 tons.

### Other Products Fall As Well

U.S. horticultural exports remained at \$1.25 billion as lower fruit juice prices offset increased vegetable volume. Tobacco exports dropped \$150 million as a lower quality U.S. crop reduced both volume and prices. However, increased export value for live animals, meats, and dairy products boosted exports of animals and products 6 percent to \$1.8 billion. Poultry meats, fats and oils, and furskins lost ground compared with the year before. (Stephen MacDonald, International Economic Indicators Branch)

Table 1--Agricultural, nonagricultural, and total trade balance

Item	October - February		February	
	1984/85	1985/86	1985	1986

# Import Value Rises

U.S. agricultural imports rose to \$8.6 billion during the first 5 months of FY 1986 (Oct. 1985-Feb. 1986), up 6 percent over those of the same period in FY 1985. Increased demand and higher prices for many products contributed to the rise. Noncompetitive imports for the period expanded 11 percent to \$3.1 billion, while competitive imports edged up 3 percent to \$5.5 billion.

Agricultural imports in January 1986 reached \$2 billion, their highest monthly level since March 1985. February's imports declined 13 percent from January's level to \$1.7 billion, due to larger domestic supplies and lower prices for some products, and were about the same as imports in February 1985. U.S. agricultural imports from developing countries accounted for 58 percent of U.S. agricultural imports and reached \$4.98 billion compared with \$3.44 billion from developed countries. Despite a 14-percent drop, Brazil continued to be the largest source of U.S. farm product imports followed by Canada, Mexico, Colombia, France, Australia, Denmark, The Netherlands, West Germany, Italy, Indonesia, Ecuador, the Philippines, and New Zealand.

## Noncompetitive Import Values Up

Noncompetitive import values accelerated 11 percent to \$3.1 billion. Value increases for coffee, bananas, spices, and essential oils more than offset declines for rubber, cocoa beans, and tea.

Coffee imports totaled \$1.7 billion, up \$372 million from a year ago. Coffee volume increased nearly 19 percent to 534,000 tons. Unit import prices advanced from an average of \$1.32 a pound in the first 5 months of FY 1985 to \$1.43 a pound in the same period in 1986. Average monthly wholesale prices for Brazilian coffee climbed from \$1.45 a pound in January 1985 to an average of \$2.41 a pound in January 1986, then receded to \$2.26 a pound in February 1986. Coffee price gains are the result of the Brazilian drought. Despite reduced export potential, Brazil maintained its lead among major U.S. coffee sources, providing 21 percent of total volume imported. Colombia, the second leading source, provided 13 percent of the total volume, followed by Mexico, Guatemala, El Salvador, Ecuador, and Indonesia.

Lower prices for cocoa beans and reduced shipments from the Ivory Coast reduced the U.S. import value of cocoa beans and products 4 percent to \$556 million. Volume, however, declined 8 percent to 227,000 tons, mainly due to lower imports for unsweetened cocoa powder and cake. In contrast, imports of cocoa butter and sweetened chocolate were significantly higher. The New York cocoa futures prices averaged \$1 a pound in February 1985, but increased world supplies pulled prices back to 91 cents a pound in February 1986. The Ivory Coast, the world's largest producer, supplied 25 percent, with Brazil, Ecuador, Canada, and The Netherlands being the other major suppliers.

Weak prices depressed rubber import values 16 percent to \$256 million. Volume, however, gained 4 percent to 351,000 tons. Unit import prices in the 5-month period plunged 20 percent to \$729 a ton. Because of depressed world rubber prices, the value of U.S. rubber imports in FY 1986 is expected to remain below year-earlier levels. Indonesia and Malaysia shipped most of the U.S. rubber imports.

U.S. banana imports surged 10 percent in value during the first 5 months to \$308 million. Ecuador, Colombia, Honduras, Costa Rica, Panama, and Guatemala accounted for 97 percent of U.S. banana import volume. Among the major suppliers, Ecuador, Costa Rica, and Colombia shipped substantially more, chiefly because of increased production. Volume from Guatemala and Panama also gained.

#### Competitive Import Values Up Moderately

Values for competitive imports, accounting for 64 percent of all U.S. agricultural imports, gained 2 percent during October-February to \$5.5 billion. Values for some competitive farm products, chiefly beef, pork, fruits, vegetables, cheese, tobacco, grains, live cattle, wine, malt beverages, fresh cut flowers, and palm oil increased more than enough to offset declines for raw sugar, orange juice, coconut oil, and live hogs.

Increased domestic demand and lower red meat supplies resulted in higher values of U.S. beef imports of \$509 million, up 3 percent from those during the same months in 1985. Volume rose 10 percent to 275,000 tons. Australia shipped 42 percent of U.S. beef imports, with New Zealand and Canada shipping another 33 percent. Pork imports gained 7 percent in value and almost 5 percent in volume. Most of the increase stemmed from increased Canadian fresh pork shipments. Canned pork from Denmark also gained.

U.S. cheese imports through February moved ahead of year-earlier values to \$180 million due to higher prices. Imports from Western Europe were particularly strong and accounted for almost 70 percent of the volume.

Sugar imports totaled \$283 million, down \$157 million from the 1985 level. Decreased values stemmed from reduced quota exemptions, lower domestic use, and increased use of corn sweeteners. The sugar import quota in FY 1986 has been tentatively set at 1.7 million tons, down nearly 336,000 tons from the 1985 quota. Sugar unit import prices declined during the October-February period, averaging \$351 a ton compared with \$407 a ton in 1985. However, sugar prices on world cash markets have firmed since January, reflecting gains from 7 cents to 10 cents a pound. U.S. sugar consumption in FY 1986 is expected to average about 63 pounds per person compared with 65 pounds per person in FY 1985. Consequently, for the first time in 5 years, world sugar consumption is expected to outstrip production during the year ending August 31, reducing the global sugar surplus. U.S. import demand for corn sweeteners was up sharply the first half of FY 1986 and is expected to continue upward the second half.

The value of imported vegetable oils declined 12 percent from October to February to \$263 million. The decline resulted from cuts in coconut and palm kernel oils. Coconut oil value dropped 24 percent to \$103 million. Because of lower prices, the volume gained sharply to 224,000 tons, with import unit prices plunging almost 50 percent. The Philippines supplied most of the coconut oil.

Import values of vegetables and preparations expanded nearly 14 percent the first 5 months to \$608 million. Import volume gained nearly 2 percent to 878,000 tons, mainly due to domestic production shortfalls and increased imports of fresh winter vegetables from Mexico. Fresh tomatoes, cucumbers, onions, peppers, squash, and eggplants were the principal vegetables imported from Mexico. Higher prices pushed the value of Mexico's major fresh winter vegetables to \$213 million compared with \$195 million during October-February 1985. Canned mushrooms from China rose sharply, while potato imports from Canada declined.

Seasonally larger domestic supplies, lower prices for oranges, and good weather through most of the growing season reduced fruit import values 13 percent in the first 5 months to \$611 million. Imports of concentrated orange juice from Brazil declined sharply in value and volume, but fresh grapes from Chile, and canned pineapples from the Philippines and Thailand substantially exceeded 1984/85 levels. Orange juice volume declined approximately 34 percent below October-February 1985 levels to 216 million gallons, valued at \$221 million. Unit import prices for orange juice dropped 17 percent.

Values for tobacco, wine, malt beverages, grains, feeds, seeds, live cattle, cashew nuts, fresh cut flowers, and wool gained to \$1.8 billion compared with \$1.5 billion the first 5 months in FY 1985, while furskins declined 11 percent.

#### Import Outlook

U.S. agricultural imports for FY 1986 are forecast at \$21 billion, up about 6 percent above those for FY 1985. Both competitive and noncompetitive commodities, mainly coffee, cocoa products, fruits, vegetables, beef, bananas, live cattle, spices, palm oil, wine, malt beverages, and dairy products, are expected to contribute to the value increases. Ample supplies are expected to reduce the imports of raw sugar, orange juice, rubber, cocoa beans, coconut oil, palm kernel oil, and live hogs.

Fruit and vegetable imports are forecast to continue strong this fiscal year because of production shortfalls for winter vegetables and lower supplies this coming spring for apples, pears, and grapefruit. Concentrated orange juice imports probably will decline the second half of FY 1986 because of Florida's larger orange crop. But total orange juice imports in FY 1986 are still expected to be relatively large. Meat and meat product import values are expected to increase to \$2.4 billion compared with \$2.2 billion in FY 1985. (Charles E. Goode, International Economic Indicators Branch)

# Dollar Stabilizes With Lower Interest Rates

The U.S. dollar continued its decline from February 1985 into the early months of 1986 as long-term interest rates fell. Sharp declines in world oil prices weakened energy-related currencies but provided prospects for lower inflation, which may help stabilize currencies near present levels. Major industrial countries (G-5) lowered their lending discount rates in early March, and again in mid-April, in response to the improved inflation outlook.

## G-5 Announcement Lowers Dollar

The dollar strengthened in September 1985 but resumed its fall against major currencies in world trade following a September 22 communique by five major industrial countries (G-5). The G-5 members (United States, United Kingdom, Germany, France, and Japan) announced their intention to lower the dollar's value against major nondollar currencies.

The announcement triggered tremendous dollar sales, and the dollar fell over 10 percent against the Japanese yen the following week. In late October, Japan substantially increased short-term interest rates, as an alternative to direct currency market intervention, to support its G-5 commitment to maintain its strengthened currencies against the U.S. dollar.

## Lower Oil Prices Weaken Energy Currencies

While the U.S. dollar continued to depreciate in large changes against the Japanese yen and more steadily against European currencies during November and December, it maintained its value against the British pound and gained against the Canadian dollar. Sharply falling world oil prices toward the end of December and into January put downward pressure on these energy-related currencies.

The U.S. dollar accelerated its appreciation against Canadian currency in late January because of concerns about Canada's unresolved budget deficit and falling energy prices. Major currency intervention by Canada and higher interest rates regained some of the currency's lost value, leaving the Canadian dollar near \$1.40 per U.S. dollar in late February. Higher interest rates in Britain controlled downward pressures on the pound, supporting the British pound near \$1.45, which it has maintained since October.

## Reduced Interest Rates and Stabilized Dollar

Japanese and German policies to continue reducing their fiscal deficits and increasing private demand through lower interest rates led the G-5 in January to consider lowering worldwide interest rates. Although no announcement was made of a concerted plan to lower interest rates, individual reductions in interest rates began soon thereafter.

Japan reduced its central bank discount rate from 5 percent to 4.5 percent on January 29. With improved inflation prospects due to lower oil prices and falling U.S. long-term interest rates, Germany reduced its discount rate from 4 percent to 3.5 percent. France and The Netherlands did the same on March 6. A second cut to 4 percent in the Japanese discount rate came the following day, followed by a cut

in the U.S. discount rate from 7.5 percent to 7 percent. Additional cuts came on April 18 with another U.S. reduction to 6.5 percent, followed on the 19th by a Japanese cut to 4 percent. France and the United Kingdom also reduced official interest rates.

Lower interest rates among the major countries should stabilize currency rates near their present rates of 180 yen and 2.25 marks per dollar, while their economies adjust to the lower dollar, interest rates, and world oil prices. (Edward C. Wilson, International Aggregate Analysis Branch)

# California Leads Farm Export States

California replaced perennial leaders Iowa and Illinois as the top U.S. agricultural export State in FY 1985 (Oct. 1984-Sept. 1985). This is the first time that a State other than Iowa or Illinois has emerged as the number one agricultural export State since export shares were first estimated in 1964. Agricultural export contributions of most States fell in 1985 as total U.S. agricultural exports fell from \$38 billion to \$31.2 billion. However, most of California's exports are in fruits, nuts, and vegetables, which, as a whole, were virtually unchanged. Other top-10 exporters were Texas, Nebraska, Kansas, Minnesota, North Dakota, Indiana, and Ohio. Despite the 18-percent decline in total export revenue, values increased for hides, dairy products, tree nuts, and tobacco.

## Top-10 Contributors

Estimated export shares for California in FY 1985 totaled \$2.7 billion, ahead of Iowa with \$2.5 billion and Illinois with \$2.3 billion (table 16). Crop production returned to more normal levels in 1984. The most critical factor in reduced export earnings for 1985 was the substantial drop in export demand for U.S. wheat and soybeans. Overseas demand for these products fell to their lowest levels in 9 and 11 years, respectively. Other States among 1985's top-10 exporters were Texas (\$2 billion), Nebraska (\$1.8 billion), Kansas (\$1.7 billion), Minnesota (\$1.6 billion), North Dakota (\$1.3 billion), Indiana (\$1.3 billion), and Ohio (\$1.1 billion). Kansas and North Dakota both felt the dramatic decline in overseas wheat demand as U.S. wheat exports fell by one-third to \$4.5 billion.

Agricultural export estimates by State are based on the assumption that if a State contributes a certain percentage of U.S. production, it contributes the same percentage in export revenues. If additional information exists (such as estimated feed use by State, or port data), it is incorporated into the estimating procedure when the benefits of improved accuracy outweigh the costs of increased computations.

We revised the methodology and expanded the coverage to 5 years (FY 1981-85). For example, rice exports were divided into long, medium, and short grain (previous years' figures underestimated Arkansas' exports by 20 percent). We also reduced the number of States designated as "exporting States" for any given commodity so that exports from States with large surplus production, which are more likely to export, are not undervalued. In FY 1984, live animal and meat data were reviewed and distributed based on shipments by Customs Districts because a large percentage of the live animals were race horses shipped from Kentucky. A similar examination of port data over the past 5 years indicated that most barley was shipped from Oregon instead of California. The size of the dairy herd in California led to the removal of California from the feed grain exporting States.

For this issue of FATUS, we gave fruits and preparations special consideration to determine if State ratios used in previous estimates were accurate. California's share increased from 50 to 53 percent. Also in this issue, the manner in which vegetable exports were apportioned was changed to reflect production used for the fresh market and production diverted into the processing industry. Using this method increased California's share of vegetable exports from 20 to 45 percent of the total. (Stephen R. Milmoie, International Economic Indicators Branch)

## Export Shares of Agricultural Production Fall

The share of U.S. agricultural production that was exported in FY 1985 (Oct. 1984-Sept. 1985), based on gross cash income, fell to 17 percent, the lowest level in 13 years, compared with 22 percent in 1984 and a peak of 26 percent in 1981. Although the farm output value rose to a record-high \$153.3 billion in 1984, exports fell to \$31.2 billion, their lowest level in 7 years (export value is multiplied by a factor of 0.85 to bring it to the farm level). Another measure used to illustrate the U.S. farm economy's dependence on exports is the amount of acreage harvested for export. In FY 1985, the output from approximately 32 percent of all U.S. farmland acreage harvested was exported.

The events of the past 4 years--the high-valued dollar, increased competition from other suppliers, and declining income--continue to depress U.S. farm exports. As export markets dry up, an imbalance is created with more farm products available on the domestic market, which drives prices down. However, lower prices have not stimulated additional demand or forestalled the loss of some markets. Commodities such as meat, milk, fruits, and vegetables, are produced almost solely for the domestic market. Less than 10 percent of this output is exported.

U.S. production of nearly all the major agricultural commodities rose in 1984, as land that had been taken out of farming for the Payment-in-Kind (PIK) program came back into production, and better growing conditions increased yields.

In the last 15 years, 60-65 percent of the U.S. wheat crop was usually exported. The strength of a growing market in less developed countries enabled U.S. farmers to expand wheat production from 40 million tons in the early 1970's to 70 million tons in the mid-1980's. Despite special efforts to promote wheat exports in the past few years, foreign sales fell 31 percent in FY 1985 to 29.7 million tons.

Rice exports fell in FY 1985 to 2 million tons, the lowest level since 1976. The 1984 harvest, meanwhile, was one-third higher than that of 1983. During 1970-82, rice production increased the most, 5.6 percent annually, of the major U.S. commodities. Exports kept pace with production throughout the 1970's and early 1980's. However, in recent years, increased self-sufficiency in food grains among the major importers and a growing Thai export market have reduced demand for U.S. rice. The 1983 PIK program cut the rice crop back to 3.2 million tons, relieving some of the downward pressure on prices.

The share of U.S. corn production exported in 1985 fell to 24 percent, reflecting greater domestic feeding from the bumper 1984 harvest. Over the past 15 years, corn export volatility has been nearly double that of production volatility, and acreage reduction programs caused much of the production variability. U.S. corn exports are expected to decline for the sixth consecutive year in FY 1986 from the record-high corn harvest of 221 million tons in 1985.

Soybean output was more successful in matching export demand than was output for other major commodities during 1970-85. The export share of soybean production remained stable compared with that of wheat, corn, and rice. However, in 1985, this share fell to 44 percent, its lowest level since the 1960's, as export demand fell 12 percent. Exports to Western Europe declined the most.

Nearly 90 percent of the U.S. cotton crop was exported in 1984, as the PIK program and other factors reduced the cotton crop by one-third. The export share fell to a more normal level of 44 percent in 1985. Meanwhile, 37 percent of the U.S. tobacco crop was exported in 1985, down from 40 percent the previous year, despite a 13-percent increase in exports. (Stephen R. Milmoe, International Economic Indicators Branch)

# Freight Rate Indexes and Freight Rate Futures Trading Are Important Analytical Tools

The costs of commercial shipping services, which transport most farm exports, influence exporters' profits and add 15-30 percent to the prices of exported products. Hence, shippers need a way to measure and forecast rate changes in the ocean shipping market, which yields a range of volatile rates. The Baltic Freight Index (BFI) of London's Baltic Exchange is one such measure. Shippers and carriers can use the BFI and freight rate futures trading to hedge against price movements in the charter market and to forecast ocean transportation rates. An individual grain exporter, for example, often expects a profit of 50 cents per metric ton. Any increase in freight rates, which sometimes fluctuate by as much as \$30 per metric ton during a 2-week period, accordingly could result in zero or negative profits for exporters.

Tracking and forecasting price movements in transportation markets poses a number of problems. The wide range of shipping arrangements made and the volatile nature of freight charges complicates tracking current rates. Information concerning future freight rates is often nonexistent or inaccurate because of the large number of factors that influence prospective market conditions.

The BFI not only helps to measure overall price changes in certain segments of the shipping markets but can be used in conjunction with futures contract sale prices for ocean freight rates to forecast shortrun freight rates in the dry bulk charter market.

## Introduction to Indexing

Index numbers are ratios that are used to measure changes in magnitude (either of quantity or price) over time. Current or previous periods are compared with a specific base period which is set equal to 100. The characteristics of index numbers, whether they measure changes in price or quantity and whether they use the base period (known as a Laspeyres index) or current period (known as a Paasche index) as a weight, yield four general types of indexes:

- o A Paasche quantity index measures changes in the quantity purchased (of a good, service, or fixed bundle of goods or services) in the base year and the current year weighted at the current year prices;
- o A Laspeyres quantity index measures changes in quantity purchased in the base year and the current year weighted at the base year prices;
- o A Paasche price index measures changes in prices or expenditures on a fixed amount of goods or services weighted by the prices in the current year; and
- o A Laspeyres price index measures changes in prices or expenditures for a fixed amount of goods or services weighted by the prices in the base year.

Changes in index numbers are expressed as percentage changes. Calculating percentage changes is necessary because the level of the index in relation to its base period affects index point changes. Percentage changes are calculated by dividing the index point difference (the difference between the current period and the previous period) by the previous index level and multiplying the results by 100.

## Practical Uses of Index Numbers

Practical uses of index numbers vary. An example of a commonly referenced index is the Consumer Price Index (CPI). The CPI is basically a Laspeyres price index and

measures the average change in prices paid by urban consumers for a fixed market basket of goods and services. The CPI can be used accordingly as a measure of inflation and can be used as an indicator of the effectiveness of Government economic policies.

Other indexes of specific commodities or markets are used to compare price movements with other statistical movements like employment, earnings, productivity, and costs.

### Shipping Indexes

Laspeyres price indexes are commonly used to analyze freight rate changes in all types of transportation markets but are especially useful in the study of shipping markets, which yield a range of volatile rates. Freight rates vary with the service type (liner or charter), voyage distance, cargo, vessel type, return cargo availability, and shipper's risk. 1/

Also, freight rates are highly volatile: The price of comparable services can change dramatically from day to day or even hour to hour, depending on the supply and demand for shipping services.

Freight rate forecasts are similarly based on an array of factors that include future supply and demand conditions in shipping markets, insurance rates, changes in shipyard production costs or capacity, fuel costs, and port congestion.

Although the intrinsic nature of freight rates make analysis of overall market conditions difficult, indexing is one way to standardize various segments of the liner and charter shipping markets and to moderate temporary or shortrun market volatilities.

In addition to its use in analyzing current market conditions, the BFI is used as a base for trading futures contracts for dry bulk freight rates and can be used in conjunction with trading activity in freight rate futures to forecast shortrun freight rate changes.

### Major Shipping Indexes

Table 21 details three freight rate indexes that represent the liner market and two segments of the charter market (the dry bulk time charter and the dry bulk trip charter). 2/ All three indexes are calculated using the Laspeyres price index formula and reported freight fixture rates.

---

1/ Liner shipping services are different from charter shipping services in that most liner carriers provide regularly scheduled services and participate in ratemaking conferences that are organized around a particular trade route. In contrast, charter tramp vessels do not offer regularly scheduled service but offer all or part of their vessel for hire by shippers.

2/ Under a trip charter shipping arrangement, the shipper contracts with the shipowner to have cargo transported between two ports and pays a specified rate per ton plus any expenses incurred because of unexpected delays in loading or unloading the vessel. Under a time charter shipping arrangement, the shipper contracts with the shipowner to use a vessel for a specific length of time--6 months, 1 year, or longer. Shippers that use time charter arrangements pay a flat rate but are responsible for fuel costs, port and canal expenses, and loading and unloading costs.

The Baltic Exchange in London initiated a new method of indexing dry bulk freight rates in January 1985. The Exchange calculates the BFI by using the Laspeyres price index formula, but a panel of eight of its senior members provides the rates. To get the BFI each day, the panel members do the following:

- o Submit the spot rate they consider applicable to each of the 13 trade routes that comprise the index (table 22),
- o Drop the high and low estimates on each route,
- o Average the remaining quotes,
- o Weight each of the 13 average rates (based on the significance of each route to total world trade), and
- o Total the weighted averages.

The advantages of the BFI over other indexes are that it provides daily (versus weekly, monthly, or quarterly) information and more specific rate information for the 13 major dry bulk trade routes that comprise the index.

Also, the BFI serves as the basis for freight rate futures trading. That is, although the contract price for freight futures reflects trading activity, the BFI is an indicator of the current market conditions upon which futures trading takes place and the BFI directly affects futures contracts four times a year when it is used to settle expiring contracts. <sup>3/</sup> The Baltic International Freight Futures Exchange and the International Futures Exchange have offered freight rate futures contracts since May 1985.

Freight futures contracts not only represent a tool for shippers and carriers to hedge against price movements in the charter market, but represent a tool to forecast future transportation rates. At any point in time, information concerning future freight market conditions is available from the trading activity--the index levels for the future contracts sold for delivery during the next 12 months. In addition, shipping analysts have devised a means for calculating rough rate forecasts for each of the individual components of the BFI. The general formula is as follows: <sup>4/</sup>

$$\begin{array}{ccccc} \text{Daily BFI rate} & & \text{Futures price} & & \text{Future rate} \\ \text{for a specific route} & \times & \text{Daily BFI} & = & \text{in dollars/ton} \\ \text{in dollars/ton} & & & & \end{array}$$

(Kay L. McLennan, International Economic Indicators Branch)

---

<sup>3/</sup> Freight futures contracts include the following specifications: (1) unit of trading is the BFI valued at \$10 per full index point; (2) delivery months are January, April, July, and October; (3) settlement day is the first business day after the last trading day; (4) last trading day is the last business day in the delivery month; and (5) settlement price is the index figure for the last trading day.

# Ranking of Major Agricultural Importers Shows Little Change

The top 10 agricultural importers, except for recent entrant Saudi Arabia, remained the same from 1976 through 1980-84 on average, although their ranking changed slightly. The 10 importers were West Germany, the USSR, the United States, Japan, the United Kingdom, France, Italy, The Netherlands, Belgium-Luxembourg, and Saudi Arabia. Together, the values of these countries' imports amounted to \$141 billion, 58 percent of the world total.

## Changing Markets: Growth and Decline

The major growth markets for agricultural imports were developing countries, primarily in the Middle East. Saudi Arabia, ranking number 26 in 1976, ranked number 10 in 1980-84. Egypt's imports were valued at \$3.2 billion in 1980-84, moving it from a 1976 ranking of 22 to 16. Its ranking changed to 12 in 1984 when it imported \$3.7 billion of agricultural products. Iraq, with imports valued at \$2.1 billion in 1980-84, moved from 42 in 1976 to number 27 in 1980-84. Markets outside the Middle East also grew. For example, Mexico ranked number 44 in 1976 but moved up to number 19 in 1980-84, with imports valued at \$2.6 billion. Nigeria jumped from its 1970 and 1976 rankings of 57 and 36, respectively, to 25 in 1980-84, with imports valued at \$2.1 billion. Taiwan moved up from number 24 in 1976 to 20 in 1980-84 by importing \$2.6 billion of agricultural products.

Import values fell primarily in the centrally planned and Western European countries. The ranking of Czechoslovakia declined from number 20 in 1976 to 30 in 1980-84; for East Germany, from 16 to 21; and for Sweden, from 18 to 28. Poland fell from a ranking of 15 in 1976 to 24 in 1980-84 when its import value fell 53 percent from the 1980 level of \$3.1 billion.

## U.S. Market Share

The U.S. market share of world imports (\$242 billion) was 16.8 percent in 1980-84. The United States had the greatest share, almost 10 percent, of the \$86-billion market in the European Community (EC). The United States also had the greatest market share in various developing countries including Mexico (75 percent), South Korea (51 percent), Taiwan (45 percent), Venezuela (43 percent), Brazil (31 percent), and Indonesia (28 percent). Together, these countries imported \$13.8 billion of U.S. farm products. The United States also had large market shares in a few developed countries, including Canada (41 percent), Japan (35 percent), and Spain (32 percent). The U.S. market share in China's \$4.6-billion market was about 30 percent. The U.S. share rose to 51 percent in 1984, but of a much smaller market of \$2.9 billion.

Growth in U.S. market shares was greatest in centrally planned countries. The U.S. share of Poland's imports grew from less than 9 percent in 1970 to 16 percent in 1980-84; in Romania, from 13 percent to 24 percent; and in China, from 15.5 percent to nearly 30 percent. The U.S. share of USSR's imports grew from less than 1 percent to nearly 9 percent in 1980-84.

The U.S. market share declined in some countries. Iran increased its imports, but the U.S. share fell from 21 percent in 1970 to 2 percent in 1980-84. Libya also increased its imports, but the U.S. share declined from 5 percent to less than 1 percent. Denmark maintained a stable ranking, but the U.S. share fell from 23 percent to 7 percent. (Arthur B. Mackie, Office of the Director)

# U.S.—Canadian Agricultural Trade Balance Reverses Direction

The United States became a net agricultural importer from Canada for the first time when U.S. agricultural exports fell 17 percent in 1985. The small U.S. agricultural trade surplus of \$112 million in 1984 became a \$272-million deficit in 1985, according to the U.S. Bureau of the Census. The decline in U.S. agricultural exports was the result of both lower volumes and prices for many commodities.

The primary reason behind the reversal in the U.S. trade position was the continuing drop in the value of the Canadian dollar against the U.S. dollar. The U.S. dollar has lost value against other major currencies over the past year but remains strong relative to the Canadian currency. Despite economic growth of about 4 percent in 1985 and a large trade surplus, the Canadian currency has been weakened by falling prices for oil and other natural resources, crises in the banking system, and a general lack of confidence in the current government's economic policies.

The outlook for 1986 is not optimistic. The Canadian dollar is likely to remain weak relative to the U.S. dollar, spurring Canadian exports to the United States. Lower U.S. prices for many commodities (grains, cotton, soybeans), as a result of new farm legislation, will contribute to lower export values because Canadian demand for these commodities is not very responsive to price declines.

The problem in comparing U.S. and Canadian trade data is that Canadian trade data tell a different story; they show the United States still in a strong net export position, by about \$1 billion in 1984. This large discrepancy is apparently due to underreporting U.S. export data. The problem involves many categories of products (grains, oilseeds, animal products) but appears to be most severe with fruits and vegetables, a major U.S. export. Some preliminary comparisons suggest that the U.S. Census Bureau may have underreported U.S. horticultural exports in 1984 by \$200-\$550 million.

## Increased Competition for U.S. Exports

The value of U.S. fruit and preparation exports to Canada in 1985 dropped 19 percent. Fresh fruits, accounting for almost 90 percent of U.S. fruit exports (not including juices), are facing increasingly stiff competition from other suppliers. Apples are a good example. According to Canadian import data, the U.S. share of Canada's apple imports dropped from 87 to 67 percent between 1981 and 1984, while other importers--South Africa, New Zealand, Chile--have increased their share.

A similar story can be told for citrus. The U.S. share of Canada's citrus market has fallen from 86 percent in 1981 to 73 percent in 1984. Imports from Morocco, Spain, and Israel have increased. High prices resulting from the strong U.S. dollar relative to the Canadian dollar could be discouraging U.S. exports while providing an opportunity for other importers.

Prospects for U.S. fruit exports are not encouraging. Canadian fruit output is expanding. U.S. citrus supplies have been damaged by serious freezes in 1983 and 1985, and Canadians have been seeking alternative suppliers. U.S. fruit exports are likely to fall again in 1986.

U.S. exports of vegetables and products also fared poorly in 1985, dropping almost a quarter in both volume and value. Canadian production of many vegetables (such as potatoes, celery, carrots, lettuce, and onions) continues to increase. Canada now exports many of these products to the United States. The strong U.S. dollar and high import prices may be stimulating Canadian production. Assuming bad weather does not hit Canadian production this summer, U.S. exports will continue to decline in 1986.

The Canadian cotton market illustrates similar difficulties facing U.S. exporters. The United States has traditionally supplied over 90 percent of Canadian cotton imports. However, because of high U.S. prices, Canadian textile manufacturers are looking for alternative suppliers, including South Africa, Pakistan, and China. In 1985, U.S. cotton exports fell 15 percent in volume and over 30 percent in value. For 1986, the U.S. share of the Canadian market may drop to only two-thirds.

#### Grains, Oilseeds, Livestock Also Slip

After healthy increases in 1984, U.S. exports of grains, oilseeds, and livestock products all fell in 1985. U.S. pork and beef exports dropped, while Canadian imports from the EC increased. U.S. poultry exports declined as Canadian production quotas were increased to meet strong domestic demand. Pork and poultry exports are likely to continue their decline in 1986, but U.S. exports of high-quality beef could stay at 1985's level.

The volume of U.S. feed grain exports in 1985 was about the same as in 1984, but lower prices brought the value down 17 percent. Canada's record-high corn crop and higher than expected barley production in 1985 will limit Canadian feed grain imports from the United States in 1986.

The volume of oilcake and meal exports remained strong in 1985, but soybean exports fell sharply. Labor problems hampered Canadian soybean crush, necessitating larger meal imports for the pork and poultry industries but limiting soybean imports. Lower prices reduced the value of all oilseed categories. These trends are likely to continue in 1986.

#### Canadian Exports Continue To Expand

Following a 25-percent jump in 1984, Canadian agricultural exports to the United States increased only 2 percent in 1985. Nevertheless, the increase was sufficient to place Canada in a net export position to the United States.

Animal product exports, accounting for about half of Canada's exports to the United States, grew 2 percent. Live hog exports tapered off after a countervailing duty of \$4.39 per hundredweight was placed on Canadian slaughter hogs in August, but still stayed high at over a million head. Both pork and beef exports to the United States showed strong increases. Pork exports may be benefiting from the duty on live hogs, which makes it more attractive for packers to slaughter hogs in Canada and ship the meat south rather than export the hogs.

The volume of several Canadian exports (including potatoes, wheat, and fruits) increased in 1985, but lower prices kept values down. Large supplies in Canada contributed to a 22-percent increase in potato exports. Canadian wheat exports to the United States more than doubled to 271,000 tons in 1985. These patterns will probably persist into 1986.

# Free Trade in Agriculture?

The United States has decided to enter into discussions with Canada on removing trade barriers between the two countries. Although no formal timetable has been laid out yet, negotiations could last for several years. Agriculture will be one of the more difficult sectors in any free trade discussion because both countries have many programs that support prices and protect farmers' incomes. The deterioration in the U.S. agricultural trade balance with Canada will also make agriculture a sensitive subject. The discrepancies in the trade data will have to be addressed if the United States and Canada begin negotiations on freer trade. (Carol Goodloe, Western Hemisphere Branch)
